SMOKE TEST

Web Alert Help

This page intends to explain how to correctly use Web Alert. To report bugs, please send an email. If you are missing a feature in the app, please check out the expansion pack.

Table of Contents

- 2. Recorder
- 3. Target Selection
- 5. Alert Settings
- 6. Changes Screen
- 7. Import
- 8. FAQ
- 9. Known Issues

Main Screen

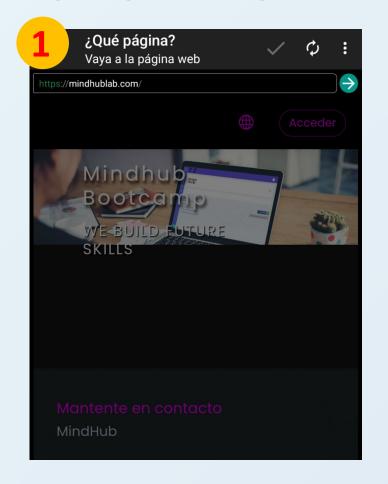

On the main screen, you see a list of all created alerts. With the plus button, you can create an alert to watch a new website for changes.

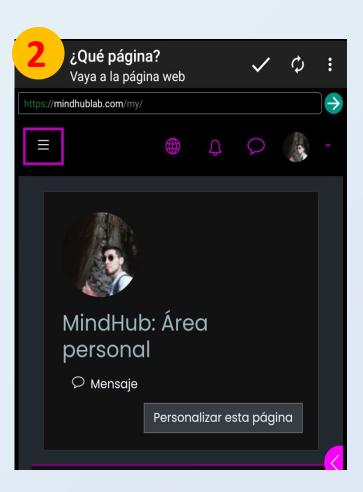

Result Codes

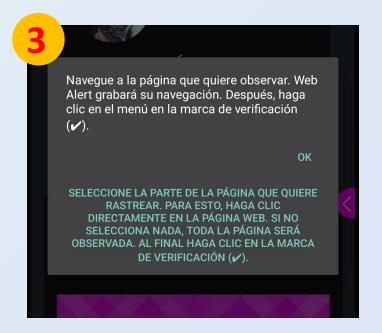

Every alert shows the result of the latest check:

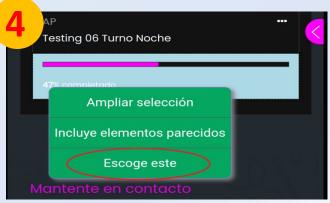

- no changes indicates that the page could be loaded successfully in the background, that the selected area could be found on the page and that its content is exactly the same as before.
- new changes signifies that the latest check found differences. You can see those changes when you click on the alert.
- · target not found means that on the current version of the website Web Alert could not find the region you selected to watch for changes. This often
